

Take-home assignment: Proto Team

Goal: Build a solution that takes a company name as input and returns **3 relevant GenAI use cases** that could be iconic or high-impact for that company using Mistral tools.

What you should build

Create a workflow where:

1. A user enters the name of a company, for example **Veolia**.
2. This triggers your solution.
3. The solution generates a structured report with **3 relevant GenAI use cases** for that company.

Recommended approach

You are free to choose the approach, tools, and level of depth you think are appropriate.

We highly recommend using **Mistral Workflows**, which can be useful for structuring your solution. Once workflow created, you can connect it to **LeChat** if you want to build a conversational workflow.

Helpful documentation:

- [Workflow guide](#)
- [Conversational workflows](#)

Guidelines

We are interested in seeing how you define what makes a GenAI use case relevant, iconic, and high-impact for a specific company. Please imagine you will ship this solution to a client. We want to see your coding practice and your approach to this use case.

Also, please have fun with this project. The goal is for you to showcase your technical skills & creativity 😊

Setup

Once you have created an account and set up AI Studio, we will provide **\$20 in credits** for you to experiment with the API. We just need you to send us your organisation ID.

Submission & contact

When you are done, please send us your **GitHub repository link**. Your repository should include enough information for us to **understand and run your solution**.

If you have a question, feel free to reach out to:

- paul.devillers@mistral.ai
- maxime.langelier@mistral.ai

Review during the Technical Manager interview

We will review your take-home during the onsite Technical Manager interview.

The interview will last **1 hour**:

- ~15 minutes: discussion of your assignment. Feel free to prepare and present your work in any format you find most effective.
- **Remaining time**: system design and behavioral questions.

You are invited to the onsite Technical Manager interview.
